

Call for Demonstration

Your chance to showcase the present and future live

The congress will offer a large-scale and unique demonstration platform for the presentation of technological innovations in the field of ITS. In form of demonstration sessions you can showcase your work on the latest technological advances and engage with the congress attendees and ITS community.

We cordially invite you to present exciting, creative technological innovations and products to a large technical expert audience.

We are excited to learn more! Ideally, your submission for the demonstrations answers the following questions:

- What is the motivation behind your innovation and why is it important for the future of Mobility?
- What does your product or technology do, how does it work and how are you going to demonstrate it?
- What does it look like? How does it compare with existing products, technologies or systems?
- What is the status of your innovation, is it still in development, is it a demonstrator or has it already been introduced to the market? How and when might your technology have an impact, either technically or commercially?

Your demonstration should deal with one of the event topics which are:

- Topic 1 Connected and Automated Driving
- Topic 2 Mobility as a Service
- Topic 3 Ports and Logistics
- Topic 4 Intelligent Infrastructure
- Topic 5 Urban Air Mobility
- Topic 6 Sustainable Transport

**We look forward
to your
contribution!**
